AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the application:

LISTING OF CLAIMS:

- 1. (original): A method for producing a solid electrolytic capacitor, wherein a solid electrolytic capacitor element comprises an anode body composed of a material containing at least one member selected from a group consisting of an earth-acid metal, an alloy comprising an earth-acid metal as the main component, an electrically conducting oxide of an earth-acid metal and a mixture of two or more thereof, a dielectric layer formed on the anode body by electrolytic oxidation (electrochemical formation) and comprising an oxide as the main component, a semiconductor layer formed on the dielectric layer, and an electrically conducting layer stacked on the semiconductor layer, and the solid electrolytic capacitor element is subjected to molding with a resin, curing and then voltage applying (aging) treatment, which method comprises repeating a step of leaving the resin-molded body to stand at a temperature of 225 to 305°C and a step of aging it are sequentially repeated twice or more after the above steps of molding with resin and curing.
- 2. (original): The method for producing a solid electrolytic capacitor as claimed in claim 1, wherein the step of leaving the resin-molded body to stand at a temperature of 225 to 305°C is a step of performing the standing at a temperature of 225 to 305°C multiple times.
- 3. (original): The method for producing a solid electrolytic capacitor as claimed in claim 1, wherein the aging step after leaving the resin-molded body to stand at a temperature of 225 to 305°C is a step of cooling the resin-molded body to a temperature of 200°C or less to cold-resistance temperature of the capacitor and then applying a voltage.

2

Preliminary Amendment Based on PCT/JP2004/010526

- 4. (currently amended): The method for producing a solid electrolytic capacitor as claimed in any one of claims 1 to 3claim 1, wherein the earth-acid metal is tantalum.
- 5. (currently amended): The method for producing a solid electrolytic capacitor as claimed in any one of claims 1 to 3 claim 1, wherein the earth-acid metal is niobium.
- 6. (currently amended): The method for producing a solid electrolytic capacitor as claimed in any one of claims 1 to 3 claim 1, wherein the electrically conducting oxide of an earth-acid metal is niobium oxide.
- 7. (currently amended): A solid electrolytic capacitor manufactured by the production method as claimed in any one of claims 1 to 6claim 1.
- 8. (original): An electronic circuit using the solid electrolytic capacitor as claimed in claim 7.
- 9. (original): An electronic device using the solid electrolytic capacitor as claimed in 7 above.
